EVIDENCECHECK

A financial-claim verification prototype

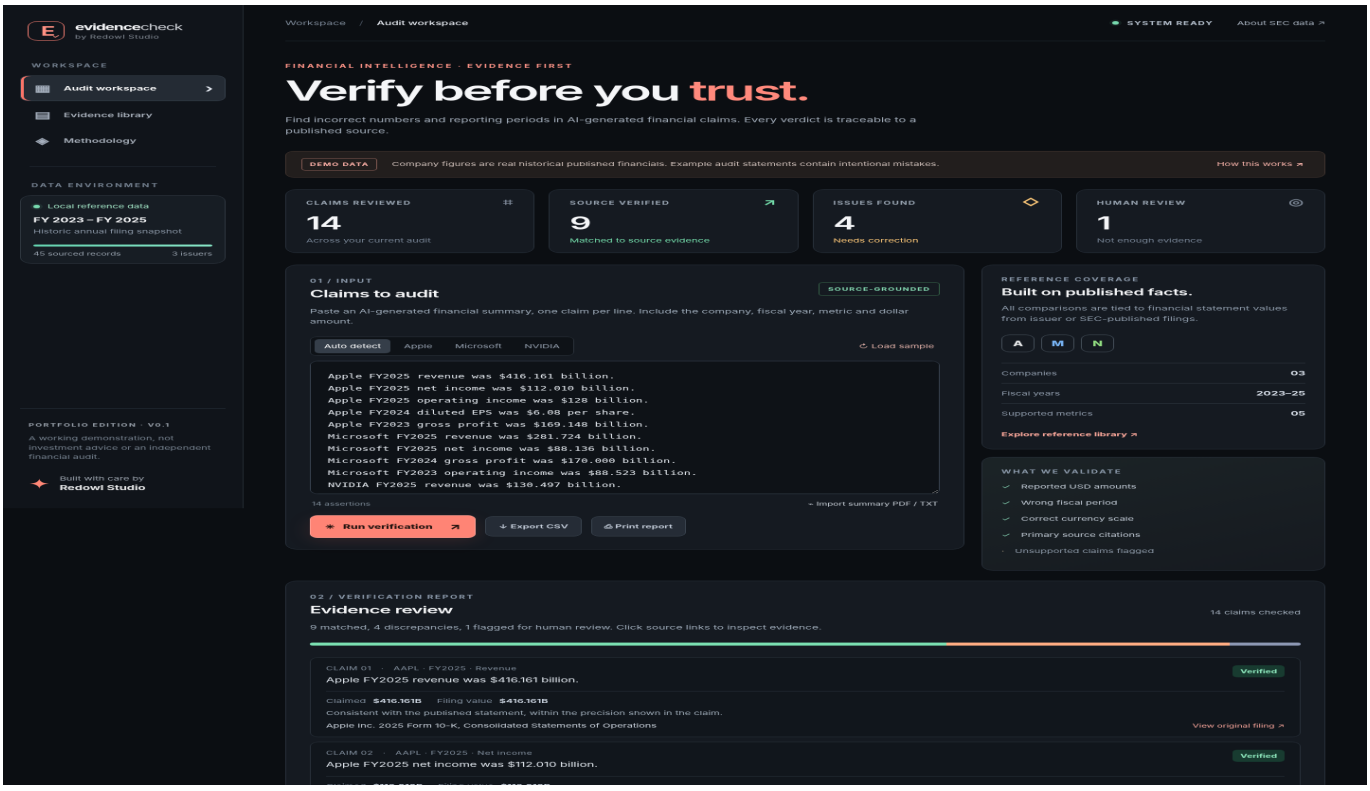

Confidence starts with evidence.

WHY IT EXISTS

Financial teams increasingly review AI-generated explanations and summaries. A convincing sentence can still contain a wrong amount or a mismatched reporting year. This prototype gives analysts a quick, traceable numerical cross-check.

14	9	4	1
TOTAL CLAIMS	VERIFIED	DISCREPANCIES	HUMAN REVIEW

THE WORKING DEMO

Source-backed results, not a simulated screenshot.

The dashboard runs on a FastAPI application with 45 historical issuer facts, an explainable comparison engine, PDF/TXT claim input, CSV export and API endpoints. Source links point to published reports.

EVIDENCE & LIMITATIONS

The 14 sample statements were authored for testing, including intentional errors. The results do not establish production model accuracy, analyst time savings, or an audit opinion.

What the verifier actually finds

Selected controlled examples from the working application

WRONG FISCAL PERIOD

Microsoft FY2025 net income: $88.136B

Source: FY2025 $101.832B. The claimed value belongs to FY2024.

WRONG AMOUNT

NVIDIA FY2025 diluted EPS: $2.49

Source: FY2025 diluted EPS $2.94 per share.

CORRECT AMOUNT

Apple FY2025 revenue: $416.161B

Source: FY2025 net sales $416,161M (equivalent to $416.161B).

HOW IT WORKS

1	**Parse**	Company + fiscal year + financial metric + USD amount
2	**Normalize**	Convert billions/millions and account for displayed precision
3	**Verify**	Compare with 45 reference facts from three FY2025 filings
4	**Explain**	Report outcome, expected value and source link

SMALL, PAID VALIDATION OFFER

$100 design-partner trial

Check 10 agreed financial claims against three public documents; share the reusable script, exceptions and sources. This is an introductory discovery scope, not production integration.
